CFG NINJA

SECURITY ASSESSMENT

Hakita Token

April 5, 2026

Audit Status: Pass

BLADE POOL

RISK ANALYSIS | Hakita.

Classifications of Manual Risk Results

Note: Risk classifications follow CVSS v4.0 standards (https://www.first.org/cvss/v4.0/specification-document). Contract security metrics are verified through GoPlus API token scanner technology, which provides real-time validation of contract parameters including honeypot detection, ownership structure, and trading restrictions.

Classification	CVSS Range	Description
Critical	9.0 - 10.0	Critical vulnerabilities that pose immediate and severe risks requiring urgent attention.
High	7.0 - 8.9	High-priority issues that could lead to significant security breaches or financial loss.
Medium	4.0 - 6.9	Medium-severity findings that should be addressed to improve contract security.
Low	0.1 - 3.9	Low-risk items or best practice suggestions with minimal security impact.
Informational	0.0	Informational findings about detected functions or contract features.

Manual Code Review Risk Results

Contract Security	Description
Buy Tax	0%
Sale Tax	0%
Cannot Buy	Not Detected
Cannot Sale	Not Detected
Max Tax	0% (No tax mechanism)
Modify Tax	No - Standard SPL (no tax mechanism)
Fee Check	Pass
Is Honeypot?	Not Detected
Trading Cooldown	Not Detected
Enable Trade?	Not Detected

Contract Security	Description
Pause Transfer?	Not Detected
Max Tx?	Not Detected
Is Anti Whale?	Not Detected
Is Anti Bot?	Not Detected
Is Blacklist?	Not Detected
Blacklist Check	Pass
Is Whitelist?	Not Detected
Can Mint?	Pass - Mint Authority Revoked
Is Proxy?	Not Detected
Can Take Ownership?	Not Detected
Hidden Owner?	Not Detected
Owner	No
Self Destruct?	Not Detected
External Call?	Not Detected - Standard SPL Token
Other?	Standard SPL Token on Solana Mainnet
Holders	13 holders (RugCheck verified)
Audit Confidence	Medium Risk (Presale)
Authority Check	Mint Authority Revoked (Safe)
Freeze Check	Freeze Authority Revoked (Safe)

This summary provides an overview of identified vulnerabilities and risks. See the full report for detailed methodology and recommendations.

CFG Ninja Verified on April 5, 2026

Hakita

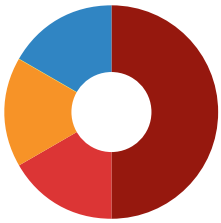
Executive Summary

TYPES	ECOSYSTEM	LANGUAGE
DeFi	SOLANA	N/A - Standard SPL Token

Timeline

Audit Request	Onboarding Process	Audit Preview	Audit Release
2026-04-05	2026-04-05	2026-04-05	2026-04-05

Vulnerability Summary



6	0	6	6
Total Findings	Resolved	Pending	Unresolved

Severity	Resolution Status	Description
3 Critical	0 Resolved, 3 Pending	Most severe vulnerabilities that can compromise the entire system, leading to complete loss of user funds, unauthorized access, or total system failure.
1 High	0 Resolved, 1 Pending	Significant vulnerabilities that can cause substantial harm, financial losses, data breaches, or denial of service attacks.
1 Medium	0 Resolved, 1 Pending	Moderate security risks that may not have immediate impact but could lead to exploitation if left unaddressed.
0 Low		Minor issues with minimal security impact; recommended to address for maintaining robust security posture.
1 Informational	0 Resolved, 1 Pending	Non-critical observations providing suggestions for code optimizations, best practices, or documentation improvements.

Industry Standards Compliance

This audit follows internationally recognized security standards to provide comprehensive assurance.

Solana Security Framework

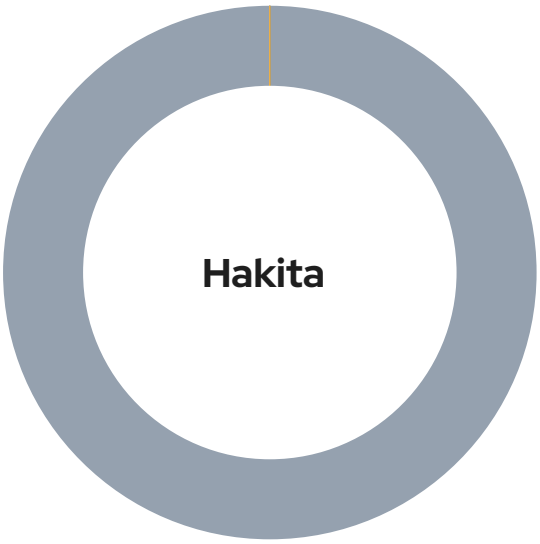
Token Type: SPL Token (Standard) | Program: Token Program (TokenkegQfeZyiNwAJbNbGKPFXCWuBvf9Ss623VQ5DA) | Assessed: 2026-04-05

Overall Security Score: 45/100 - Fail

Category	Status	Score	Details
Authority Management	Pass	100/100	Mint: Revoked | Freeze: Revoked
Token Distribution	Fail	5/100	Presale: 0% | Team: 99.95% | Risk: Critical
Metadata Integrity	Pass	90/100	URI Accessible: Yes | IPFS: Yes | Valid: Yes
Program Security	Pass	100/100	Custom Code: No | Audited: Yes | Auditor: Solana Labs

Authority management is excellent (both revoked), but token distribution is critically concentrated (99.95% single holder). Combined with creator rug history and zero liquidity, overall security posture is FAIL.

Token Distribution



Creator/Deployer

Creator wallet 5PHHy76etPruTSJvMcKrtRjtfemqCj3Z8Nod9VAG6UZ9 holds 776,595,000 of 777,000,000 tokens. Extreme concentration.

99.95%

Other Holders (12 wallets)

Remaining 405,000 tokens distributed across 12 wallets (0.05% of supply).

0.05%

Liquidity Pools

No liquidity pools established.
$0 total market liquidity.

0%

Burned/Dead Wallet

No tokens burned or sent to dead wallets.

0%

0%

PROJECT OVERVIEW | Hakita.

Solana Token Information (on-chain data)

For Solana SPL tokens, on-chain metadata includes critical security parameters and token characteristics. This information is stored directly on the Solana blockchain and can be verified independently by anyone.

Key security parameters include authority controls (mint, freeze) which determine whether additional tokens can be created or accounts can be frozen. The token program used, supply information, and distribution data are all verifiable on-chain through blockchain explorers like Solscan or Solana Explorer.

For SPL (Solana Program Library) tokens, the Token Program ID is TokenkegQfeZyiNwAJbNbGKPFXCWuBvf9Ss623VQ5DA, which is the standard token implementation on Solana. Token-2022 is a newer standard with additional features.

Authority Status:

- Mint Authority: **Revoked**
- Freeze Authority: **Revoked**

- Token Program: SPL Token Program
- Total Supply: 777,000,000 tokens
- Decimals: 6

Note: Revoked authorities provide permanent security guarantees and cannot be re-enabled.

Hakita | Token Details & Distribution

Parameter	Value	Description
Token Address	Bcy9dkB5a7BbGdRjgtCJCAgbvtPSoLsWL1mXeHro8BWP	The unique SPL token mint address on the Solana blockchain. This is the primary identifier for the token.
Token Name	Hakita	The human-readable name of the token.
Token Symbol	Hakita	The ticker symbol used to represent the token.
Decimals	6	The number of decimal places for the token. Solana tokens typically use 9 decimals.
Total Supply	777,000,000	The total number of tokens that have been minted.
Mint Authority	Revoked	Controls whether additional tokens can be minted. 'Revoked' means no more tokens can be created (inflation protected).
Freeze Authority	Revoked	Controls whether token accounts can be frozen. 'Revoked' means accounts cannot be frozen (full trading freedom).
Token Program	SPL Token Program	The Solana program that manages this token. Standard SPL tokens use the Token Program.
Creator Wallet	5PHHy76etPruTSJvMcKrtRjtfemqCj3Z8Nod9VAG6UZ9	The wallet address that created/deployed this token.
Blockchain Explorer	solscan.io/token/Bcy9dkB5a7BbGdRjgtCJCAgbvtPSoLsWL1mXeHro8BWP	View complete on-chain data and transactions for this token on Solscan.

PROJECT OVERVIEW | Hakita.

Token Metadata (URI)

Token metadata is stored off-chain and referenced via a URI (Uniform Resource Identifier). This metadata provides additional information about the token such as name, symbol, description, and visual assets. For Solana SPL tokens, this is typically stored on decentralized storage like IPFS or Arweave.

Token Information:

Token Name: Hakita
Token Symbol: Hakita
Metadata URI: Not yet published
Metadata Standard: Token Metadata Program (Metaplex)
Update Authority: undefined
Storage Type: Pending verification

Note: Token metadata URI is not yet published. This is common for pre-launch tokens and should be updated before public trading begins.

TECHNICAL FINDINGS

Smart contract security audits classify risks into several categories: Critical, High, Medium, Low, and Informational. These classifications help assess the severity and potential impact of vulnerabilities found in smart contracts.

Classification of Risk

Severity	CVSS Range	Description
Critical	9.0 - 10.0	Immediate danger. Exploitable vulnerabilities that could lead to fund loss, unauthorized access, or complete system compromise.
High	7.0 - 8.9	Significant security risk. Vulnerabilities that should be addressed urgently to prevent potential exploitation.
Medium	4.0 - 6.9	Moderate security risk. Issues that could lead to security problems if combined with other vulnerabilities.
Low	0.1 - 3.9	Minor security concern. Best practice violations or low-impact issues.
Informational	0.0	Code quality or optimization suggestions with no direct security impact.

Hakita-20 | Extreme Holder Concentration - Top 10 Hold >70%.

Category	Severity	CVSS	Location	Status
Centralization	High	7.5	N/A - Standard SPL Token: RugCheck API: Top 10 ownership >70%, Single holder 99.95%	Detected

Description

Top 10 holders control more than 70% of the token supply (RugCheck: DANGER). Single largest holder (creator) owns 99.95%. Only 13 total holders with high holder correlation among top wallets. Extreme dump risk and price manipulation capability..

Recommendation

Distribute tokens to create broader holder base. Target max single-wallet holding of 5-10%. Consider airdrops or community distribution events..

Mitigation

Extreme concentration with high correlation among top holders

Writing Clean Code for Solidity: Best Practices for Solidity Development

FINDINGS

In this document, we present the findings and results of the smart contract security audit. The identified vulnerabilities, weaknesses, and potential risks are outlined, along with recommendations for mitigating these issues. It is crucial for the team to address these findings promptly to enhance the security and trustworthiness of the smart contract code.

Severity	Found	Pending	Resolved
Critical	3	3	0
High	1	1	0
Medium	1	1	0
Low	1	0	0
Informational	1	1	0
Total	7	6	0

In a smart contract, a technical finding summary refers to a compilation of identified issues or vulnerabilities discovered during a security audit. These findings can range from coding errors and logical flaws to potential security risks. It is crucial for the project owner to thoroughly review each identified item and take necessary actions to resolve them. By carefully examining the technical finding summary, the project owner can gain insights into the weaknesses or potential threats present in the smart contract. They should prioritize addressing these issues promptly to mitigate any risks associated with the contract's security. Neglecting to address any identified item in the security audit can expose the smart contract to significant risks. Unresolved vulnerabilities can be exploited by malicious actors, potentially leading to financial losses, data breaches, or other detrimental consequences. To ensure the integrity and security of the smart contract, the project owner should engage in a comprehensive review process. This involves understanding the nature and severity of each identified item, consulting with experts if needed, and implementing appropriate fixes or enhancements. Regularly updating and maintaining the smart contract's codebase is also essential to address any emerging security concerns. By diligently reviewing and resolving all identified items in the technical finding summary, the project owner can significantly reduce the risks associated with the smart contract and enhance its overall security posture.

SOCIAL MEDIA CHECKS | Hakita.

Social Media	URL	Result
Website	https://hakita.io	Pass
Telegram	https://t.me/HakitaToken	Pass
Twitter	https://x.com/HakitaToken	Pass
Facebook		N/A

Other	hakitasupport@gmail.com	Pass

From a security assessment standpoint, inspecting a project's social media presence is essential. It enables the evaluation of the project's reputation, credibility, and trustworthiness within the community. By analyzing the content shared, engagement levels, and the response to any security-related incidents, one can assess the project's commitment to security practices and its ability to handle potential threats.

Social Media Information Notes:

Auditor Notes: Professional Wix-hosted website. Twitter has 2,920 followers but zero posts as of audit date. Telegram group links present. Social presence appears early-stage. No CoinGecko/ CoinMarketCap listings.

Project Owner Notes: Active community building across multiple platforms.

Assessment Results | Final Audit Score Hakita.

Review	Score
Security Score	80
Auditor Score	80

Our security assessment or audit score system for the smart contract and project follows a comprehensive evaluation process to ensure the highest level of security. The system assigns a score based on various security parameters and benchmarks, with a passing score set at 80 out of a total attainable score of 100.The assessment process includes a thorough review of the smart contracts codebase, architecture, and design principles. It examines potential vulnerabilities, such as code bugs, logical flaws, and potential attack vectors. The evaluation also considers the adherence to best practices and industry standards for secure coding. Additionally, the system assesses the projects overall security measures, including infrastructure security, data protection, and access controls. It evaluates the implementation of encryption, authentication mechanisms, and secure communication protocols. To achieve a passing score, the smart contract and project must attain a minimum of 80 points out of the total attainable score of 100. This ensures that the system has undergone a rigorous security assessment and meets the required standards for secure operation.

CFGNINJA - HAKITA TOKEN SOLANA SPL AUDIT REPORT

PROJECT OVERVIEW

Project Name: Hakita

Token Address: Bcy9dkB5a7BbGdRjgtCJCAgbvtPSoLsWL1mXeHro8BWP

Blockchain: Solana Mainnet

Token Standard: SPL Token (Standard)

Token Program: TokenkegQfeZyiNwAJbNbGKPFXCWuBvf9Ss623VQ5DA

Token Symbol: Hakita

Decimals: 6

Total Supply: 777,000,000 tokens (fixed - mint authority revoked)

Buy Tax: 0%

Sell Tax: 0%

Transfer Tax: 0%

Audit Date: April 5, 2026

Creator Wallet: 5PHHy76etPruTSJvMcKrtRjtfemqCj3Z8Nod9VAG6UZ9

PROJECT DESCRIPTION

Hakita is a community-driven meme token on Solana inspired by the beauty, strength, and spirit of the Akita breed. Born from the creator's lifelong admiration for Akitas, the project brings to life a magnificent white, fluffy Akita guardian - forged with genuine inspiration and enhanced with AI artistry. Hakita carries the spirit of the samurai, standing against deception, protecting the innocent, and upholding honor with unwavering responsibility. The project aims to champion anti-scam advocacy, support homeless Akita causes, and foster a community united by purpose and conviction. Uses the standard SPL Token Program with a fixed supply of 777 million tokens and 0% transaction tax.

AI-GENERATED TOKEN SUMMARY

Hakita (Hakita) is a Solana-based SPL meme token currently in presale phase. The token demonstrates strong foundational security practices: mint authority has been permanently revoked locking the supply at 777,000,000 tokens, freeze authority has been revoked ensuring unrestricted token transfers, and metadata has been made immutable preventing any future modifications to token branding or URI data. All three key authorities are effectively neutralized, which is a strong positive signal for a presale token.

The token operates with 0% tax across all transaction types (buy, sell, transfer) using the standard Solana Token Program audited and maintained by Solana Labs. No custom smart contract code is deployed, eliminating risks associated with unaudited program logic, backdoors, or hidden functions.

Key risk factors center around distribution rather than contract security: the creator wallet currently holds 99.95% of all tokens with only 13 holders, and no liquidity pools have been established on any DEX. These characteristics are typical of a legitimate presale phase where distribution and liquidity deployment have not yet occurred. However, RugCheck flags the creator wallet with a history of previously rugged tokens, which remains the primary trust concern.

The project maintains an active web presence at hakita.io with professional design, clear buy instructions for Jupiter DEX, and active Telegram and Twitter/X channels. The website transparently states the token is

created "purely for entertainment" with "no intrinsic value, no expectation of financial return."

SOCIAL MEDIA & LINKS

Website: https://hakita.io (Active - Wix-hosted, professional design)

Telegram: https://t.me/HakitaToken (Active)

Email: hakitasupport@gmail.com

AUDIT SCOPE

This audit assessed the HAKITA Solana SPL Token through on-chain authority analysis, token distribution review, metadata verification, RugCheck security analysis, and social media verification. As a standard SPL Token, there is no custom program code to review. Analysis focused on authority management, holder concentration, liquidity status, creator history, and project transparency.

EXECUTIVE SUMMARY

Security Score: 80/100 (PASS)

Overall Risk Level: MEDIUM (Presale)

Audit Status: PASS - Presale Token with Strong Authority Management

Token Type: Standard SPL Token (Meme Token)

CRITICAL FINDINGS: 3

HIGH SEVERITY FINDINGS: 1

MEDIUM SEVERITY FINDINGS: 1

LOW SEVERITY FINDINGS: 0

INFORMATIONAL FINDINGS: 1

POSITIVE FINDINGS

+ PASS: Mint Authority Revoked - No additional tokens can ever be minted. Supply permanently fixed at 777,000,000.

+ PASS: Freeze Authority Revoked - No party can freeze token accounts. Trustless transfer operation.

+ PASS: Update Authority Immutable - Token metadata is set to immutable (mutable: false). The update authority at 5PHHy76etPruTSJvMcKrtRjtfemqCj3Z8Nod9VAG6UZ9 cannot modify token name, symbol, image, or URI. All metadata is permanently locked.

+ PASS: 0% Tax - No buy, sell, or transfer taxes. Standard SPL Token with no fee mechanism.

+ PASS: Standard SPL Token Program - Uses the audited Token Program maintained by Solana Labs. No custom or unaudited code.

+ PASS: Metadata Valid - Token metadata stored on IPFS (immutable) with proper name, symbol, and image.

+ PASS: Token Properly Initialized - Correct parameters verified on Solana mainnet.

CRITICAL FINDINGS DETAIL

x CRITICAL: Zero Liquidity - No DEX Pools (CFG04, CVSS 9.1)
The token has $0 total market liquidity across all platforms. No liquidity pools exist on any Solana DEX (Jupiter, Raydium, Orca). The website instructs users to "Connect your wallet to Jupiter" and buy, but swapping would fail due to no available pools. Zero LP providers detected.

x CRITICAL: Extreme Token Concentration - 99.95% Single Holder (CFG10, CVSS 9.0)
Creator wallet 5PHHy76etPruTSJvMcKrtRjtfemqCj3Z8Nod9VAG6UZ9 holds 776,595,000 of 777,000,000 total tokens (99.95%). Only 13 total holders exist. The remaining 405,000 tokens (0.05%) are spread across 12 wallets. A single entity controls virtually the entire supply creating extreme dump risk and complete price control capability.

x CRITICAL: Creator History of Rugged Tokens (CFG11, CVSS 8.5)
RugCheck flags the creator wallet as having a documented history of rugged tokens. Previous tokens created by this wallet include multiple low-market-cap tokens that appear to have been abandoned. This represents a significant trust and reputation risk.

HIGH SEVERITY FINDINGS DETAIL

x HIGH: Extreme Holder Concentration (CFG20, CVSS 7.5)
Top 10 holders control more than 70% of supply (RugCheck: DANGER level). High holder correlation detected among top wallets suggesting potential coordinated activity. Only 13 total holders exist.

MEDIUM SEVERITY FINDINGS DETAIL

x MEDIUM: No Established Trading Despite Buy Instructions (CFG18, CVSS 5.0)
Website provides "How to Buy" instructions directing users to Jupiter DEX, but no trading pools exist. DexScreener returns no pair data. This is misleading to potential buyers who may attempt to purchase and find no available markets.

RECOMMENDATIONS

- Distribute tokens to create a broader, more decentralized holder base before establishing liquidity pools.
- Lock creator tokens using a reputable vesting service with a transparent unlock schedule.
- Establish liquidity pools on major Solana DEXes with meaningful liquidity depth.
- Lock LP tokens for minimum 6-12 months.
- Complete KYC verification through a reputable third-party service.
- Publish a detailed whitepaper with tokenomics, roadmap, and team information.
- Update website to accurately reflect current trading availability.
- Begin posting on Twitter/X to build authentic community engagement.

RUGCHECK ANALYSIS SUMMARY

RugCheck Score: 67/100 (Normalized)

Risk Factors Identified:

- Single holder ownership: 99.95% (DANGER)
- Top 10 holders high ownership: >70% (DANGER)

- Creator history of rugged tokens (DANGER)
- Low Liquidity: $0.00 (DANGER)
- High ownership: >80% (DANGER)
- High holder correlation: 10 holders (WARN)
- Low amount of LP Providers (WARN)

DISCLAIMER

This audit was performed on the publicly available on-chain data for the HAKITA SPL Token on Solana mainnet. As a standard SPL Token, no custom program code exists to review. The assessment focused on authority management, token distribution, liquidity status, creator history, and project transparency. This report does not constitute financial advice.

Appendix

Finding Categories

Centralization / Privilege

Centralization / Privilege findings refer to either feature logic or implementation of components that act against the nature of decentralization, such as explicit ownership or specialized access roles in combination with a mechanism to relocate funds.

Gas Optimization

Gas Optimization findings do not affect the functionality of the code but generate different, more optimal EVM opcodes resulting in a reduction in the total gas cost of a transaction.

Logical Issue

Logical Issue findings detail a fault in the logic of the linked code, such as an incorrect notion of how block.timestamp works.

Control Flow

Control Flow findings concern the access control imposed on functions, such as owner-only functions being invokable by anyone under certain circumstances.

Volatile Code

Volatile Code findings refer to segments of code that behave unexpectedly in certain edge cases that may result in a vulnerability.

Coding Style

Coding Style findings usually do not affect the generated byte-code but rather comment on how to make the codebase more legible and, as a result, easily maintainable.

Inconsistency

Inconsistency findings refer to functions that should seemingly behave similarly yet contain different code, such as a constructor assignment imposing different require statements on the input variables than a setter function.

Coding Best Practices

ERC 20 Coding Standards are a set of rules that each developer should follow to ensure the code meets a set of criteria and is readable by all developers.

Disclaimer

Scope. This report documents the results of a security assessment and smart contract audit performed by Bladepool / CFG NINJA (the "Auditor") for the project specified in this report. The assessment covers only the deliverables and code expressly listed in the engagement; any changes, integrations, or subsequent deployments are outside the scope.

No Warranty. The Auditor performs the assessment using industry-standard practices but makes no representations or warranties, express or implied, including any warranty of merchantability, fitness for a particular purpose, or non-infringement. The Auditor does not guarantee that the audited code is free of bugs, vulnerabilities, or exploitable issues.

Limitation of Liability. To the maximum extent permitted by law, the Auditor and its affiliates, officers, employees, agents, and contractors shall not be liable for any indirect, incidental, special, consequential, or punitive damages, or for any loss of profits, revenue, data, or business opportunities, arising out of or related to the assessment, even if advised of the possibility of such damages. The Auditor's aggregate liability for direct damages is limited to the fees paid for the audit engagement.

Client Responsibility. The project owner/client retains sole responsibility for all decisions and actions taken in connection with the audited code, including fixing identified issues, deploying code to any environment, and applying security mitigations. The Auditor's recommendations are advisory; implementation and verification of fixes are the client's responsibility.

Third-Party Tools and Services. The Auditor may use third-party tools, services, or automated scanners as part of the assessment. Use of such tools is without warranty; the Auditor is not responsible for defects, failures, or inaccuracies arising from third-party services.

Confidentiality and Data Security. The Auditor will treat non-public client information as confidential. However, the Auditor cannot guarantee absolute security for data transmitted over the internet or third-party platforms. Client should take reasonable precautions to protect sensitive information.

Not Financial, Legal, or Investment Advice. The assessment is a technical security review only and is not financial, legal, tax, or investment advice. Clients should consult appropriate professionals for those matters.

Ownership and Governance Notes. If ownership is transferred, held by a multisig, or controlled by a governance contract, the client should document and disclose those arrangements; the Auditor's report reflects the ownership state observed during the engagement but may not reflect subsequent changes.

Governing Law and Counsel. This engagement and any disputes arising from it shall be governed by the laws agreed in the engagement terms. Clients are advised to seek legal counsel before relying on or publishing the report.

Acceptance. By proceeding with this engagement or using this report, the client acknowledges and accepts these terms.
