### 1 Audit Summary

### 2 Project Overview

- 2.1 Token Summary
- 2.2 Risk Analysis Summary
- 2.3 Main Contract Assessed

### 3 Smart Contract Risk Checks

- 3.1 Mint Check
- 3.2 Fees Check
- 3.3 Blacklist Check
- 3.4 MaxTx Check
- 3.5 Pause Trade Check
- 4 Contract Ownership
- **5 Liquidity Ownership**
- 6 KYC Check

### 7 Smart Contract Vulnerability Checks

- 7.1 Smart Contract Vulnerability Details
- 7.2 Smart Contract Inheritance Details
- 7.3 Smart Contract Privileged Functions
- 8 Assessment Results and Notes(Important)
- 9 Social Media Check(Informational)
- 10 Technical Findings Summary
- 11 Disclaimer

# **Audit Summary**

This report has been prepared for TokenName Token on the Binance Smart Chain network. CFGNINJA provides both client-centered and user-centered examination of the smart contracts and their current status when applicable. This report represents the security assessment made to find issues and vulnerabilities on the source code along with the current liquidity and token holder statistics of the protocol.

A comprehensive examination has been performed, utilizing Cross Referencing, Static Analysis, In-House Security Tools, and line-by-line Manual Review.

The auditing process pays special attention to the following considerations:

- Testing the smart contracts against both common and uncommon attack vectors.
- Inspecting liquidity and holders statistics to inform the current status to both users and client when applicable.
- Assessing the codebase to ensure compliance with current best practices and industry standards.
- Verifying contract functions that allow trusted and/or untrusted actors to mint, lock, pause, and transfer assets.

# **Project Overview**

## **Token Summary**

Parameter	Result
Address	0x2C10eaE400CbDc1Fd67e2244074F1aBccc3F03e7
Name	TokenName
Token Tracker	TokenName (TokenSymbol)
Decimals	9
Supply	5,000,000
Platform	Binance Smart Chain
compiler	v0.8.9+commit.e5eed63a
Contract Name	SST
Optimization	Yes with 200 runs
LicenseType	MIT
Language	Solidity
Codebase	https://bscscan.com/address/0x2C10eaE400CbDc1Fd67e2244 074F1aBccc3F03e7#code
Payment Tx	0xba0c29e15c68c137f60202e9216f0ae8a76ce4003be6cacca d822eda278522be

# **Project Overview**

## Risk Analysis Summary

Parameter	Result
Buy Tax	5%
Sale Tax	5%
Is honeypot?	Clean
Can edit tax?	Yes
Is anti whale?	No
Is blacklisted?	No
Is whitelisted?	No
Holders	Clean
Security Score	95/100
Auditor Score	92/100
Confidence Level	Pass

The following quick summary has been added to the project overview, however there are more details about the audit and their results please read every details.

# Main Contract Assessed Contract Name

Name	Contract	Live
TokenName	0x2C10eaE400CbDc1Fd67e2244074F1aBccc3F03e7	Yes

# TestNet Contract Assessed Contract Name

Name	Contract	Live
TokenName	0x14B823b1F7d17Ec7fc82E06B94224BA3707b73B5	Yes

## **Solidity Code Provided**

SolID	File Sha-1	FileName
SST	d57ac1b408dc82d421b493f31b563cc17d5052d1	SST.sol

# **Mint Check**

The Project Owners of TokenName does not have a mint function in the contract, owner cannot mint tokens after initial deploy

The Project has a Total Supply of 5,000,000 and cannot mint any more than the Max Supply.

Mint Notes:

Auditor Notes: A Mint Function was not found during the code review

Project Owner Notes:

## **Fees Check**

The Project Owners of TokenName does not have the ability to set fees higher than 25%.

Team May have fees defined, however they dont have the ability to set those fees higher than 25%.

Tax Fee Notes:

Auditor Notes: Contract currently have 9% tax and can be increased, if the customer use the settee function it will break the contract. there is a log that revert to 10% and this logic does not work as intended

Project Owner Notes:.

# **Blacklist Check**

The Project Owners of TokenName does not have a blacklist function their contract.

The Project allow owners to transfer their tokens without any restrictions.

Token owner cannot blacklist the contract: Malicious or compromised owners can trap contracts relying on tokens with a blacklist.

#### **Blacklist Notes:**

Auditor Notes: Contract does not have a blacklist function presented, auditor reviewed the contract and this was not found.

Project Owner Notes: .

# MaxTx Check

The Project Onwers of TokenName does not has the ability to set max tx amount

The Team allow any investors to swap, transfer or sale their total amount if needed.

MaxTX Notes:

Auditor Notes: No max tx found.

**Project Owner Notes:** 

**Project Has No MaxTX** 

# **Pause Trade Check**

The Project Onwers of TokenName Owner can pause trading but he can't move tokens (Owner can't pause trading)

The Team has done a great job to avoid stop trading, and investors has the ability to trade at any given time without any problems

Pause Trade Notes:

Auditor Notes: Not found.

**Project Owner Notes:** 

# **Contract Ownership**

The contract ownership of TokenName is not currently renounced. The ownership of the contract grants special powers to the protocol creators, making them the sole addresses that can call sensible ownable functions that may alter the state of the protocol.

The current owner is the address

Oxc1F128C4c4178CC3E619edC96OcCCa63cE128EE3

which can be viewed from:

### **HERE**

The owner wallet has the power to call the functions displayed on the priviliged functions chart below, if the owner wallet is compromised this privileges could be exploited.

We recommend the team to renounce ownership at the right timing if possible, or gradually migrate to a timelock with governing functionalities in respect of transparency and safety considerations.

We recommend the team to use a Multisignature Wallet if contract is not going to be renounced, this will give the ability to the team to have more control over the contract.

# **Liquidity Ownership**

The token does not have liquidity at the moment of the audit, block 19947267

If liquidity is unlocked, then the token developers can do what is infamously known as 'rugpull'. Once investors start buying token from the exchange, the liquidity pool will accumulate more and more coins of established value (e.g., ETH or BNB or Tether). This is because investors are basically sending these tokens of value to the exchange, to get the new token. Developers can withdraw this liquidity from the exchange, cash in all the value and run off with it. Liquidity is locked by renouncing the ownership of liquidity pool (LP) tokens for a fixed time period, by sending them to a time-lock smart contract. Without ownership of LP tokens, developers cannot get liquidity pool funds back. This provides confidence to the investors that the token developers will not run away with the liquidity money. It is now a standard practice that all token developers follow, and this is what really differentiates a scam coin from a real one.

### Read More

# **KYC Information**

The Project Owners of TokenName is not KYC...

The owner wallet has the power to call the functions displayed on the priviliged functions chart below, if the owner wallet is compromised this privileges could be exploited.

We recommend the team to renounce ownership at the right timing if possible, or gradually migrate to a timelock with governing functionalities in respect of transparency and safety considerations.

**KYC Information Notes:** 

Auditor Notes: Asked project owner about KYC, Project owner is currently working with Pinksale to get KYC.

**Project Owner Notes:**

SWC-136	Pass	Unencrypted Private Data On-Chain.	SST.sol	L: 0 C: 0

We scan the contract for additional security issues using MYTHX and industry standard security scanning tool

**SWC Information Notes:** 

**Auditor Notes:** 

No Vulnerabilities where found during the security scan.

Project Owner Notes:

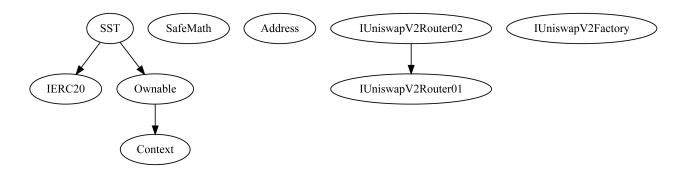

# Call Graph and Inheritance

# The contract for TokenName has the following call graph structure

# Priviliged Functions (onlyOwner)

Function Name	Parameters	Visibility
renounceOwnershi	none	public
p transferOwnership	address newOwner	public
setSwapAndLiquify Enabled	_enabled (bool)	public
setTaxFee	taxFeeBps (uint256)	exter nal
setLiquidityFee	liquidityFeeBps (uint256)	exter nal
setCharityFee	charityFee (uint256)	exter nal
includeInFee	account (address)	exter nal
excludeFromFee	account (address)	exter nal

### **Assessment Results**

- Deployer wallet was first seen 7/28/2022, Customer did it intentionally to show the wallet as deployer.
- Deployer wallet received funds from https:// bscscan.com/address/0x0c55cc73aad79a3d9492f04e6
   8328bca569d0692
- Owner can charge fees up to 25%.
- Owner can't set max tx amount.
- Owner can't pause trading.

### **Audit Passed**

# **Social Media Checks**

Social Media	URL	Result

Project Owner Notes: No other social media

# **Technical Findings Summary**

### **Classification of Risk**

Severity	Description
Critical	risks are those that impact the safe functioning of a platform and must be addressed before launch. Users should not invest in any project with outstanding critical risks.
<ul><li>Major</li></ul>	risks can include centralization issues and logical errors. Under specific circumstances, these major risks can lead to loss of funds and/or control of the project.
<ul><li>Medium</li></ul>	risks may not pose a direct risk to users' funds, but they can affect the overall functioning of a platform
Minor	risks can be any of the above but on a smaller scale. They generally do not compromise the overall integrity of the project, but they may be less efficient than other solutions.
<ul><li>Informational</li></ul>	errors are often recommendations to improve the style of the code or certain operations to fall within industry best practices. They usually do not affect the overall functioning of the code.

## **Findings**

Severity	Found	Pending	Resolved
Critical	0	0	0
<ul><li>Major</li></ul>	1	0	1
<ul><li>Medium</li></ul>	1	0	1
<ul><li>Minor</li></ul>	0	0	1
<ul><li>Informational</li></ul>	0	0	1
Total	10	0	10

# **Appendix**

## **Finding Categories**

### **Centralization / Privilege**

Centralization / Privilege findings refer to either feature logic or implementation of components that actagainst the nature of decentralization, such as explicit ownership or specialized access roles incombination with a mechanism to relocate funds.

### **Gas Optimization**

Gas Optimization findings do not affect the functionality of the code but generate different, more optimalEVM opcodes resulting in a reduction on the total gas cost of a transaction.

### **Logical Issue**

Logical Issue findings detail a fault in the logic of the linked code, such as an incorrect notion on howblock.timestamp works.

### **Control Flow**

Control Flow findings concern the access control imposed on functions, such as owneronly functionsbeing invoke-able by anyone under certain circumstances.

### **Volatile Code**

Volatile Code findings refer to segments of code that behave unexpectedly on certain edge cases that mayresult in a vulnerability.

### **Coding Style**

Coding Style findings usually do not affect the generated byte-code but rather comment on how to makethe codebase more legible and, as a result, easily maintainable.

### **Inconsistency**

Inconsistency findings refer to functions that should seemingly behave similarly yet contain different code, such as a constructor assignment imposing different require statements on the input variables than a setterfunction.

### **Coding Best Practices**

ERC 20 Conding Standards are a set of rules that each developer should follow to ensure the code meet a set of creterias and is readable by all the developers.

### **Disclaimer**

CFGNINJA has conducted an independent audit to verify the integrity of and highlight any vulnerabilities or errors, intentional or unintentional, that may be present in the codes that were provided for the scope of this audit. This audit report does not constitute agreement, acceptance or advocation for the Project that was audited, and users relying on this audit report should not consider this as having any merit for financial advice in any shape, form or nature. The contracts audited do not account for any economic developments that may be pursued by the Project in question, and that the veracity of the findings thus presented in this report relate solely to the proficiency, competence, aptitude and discretion of our independent auditors, who make no guarantees nor assurance that the contracts are completely free of exploits, bugs, vulnerabilities or deprecation of technologies.

All information provided in this report does not constitute financial or investment advice, nor should it be used to signal that any persons reading this report should invest their funds without sufficient individual due diligence regardless of the findings presented in this report. Information is provided 'as is', and CFGNINJA is under no covenant to the completeness, accuracy or solidity of the contracts audited. In no event will CFGNINJA or its partners, employees, agents or parties related to the provision of this audit report be liable to any parties for, or lack thereof, decisions and/or actions with regards to the information provided in this audit report.

The assessment services provided by CFGNINJA is subject to dependencies and under continuing development. You agree that your access and/or use, including but not limited to any services, reports, and materials, will be at your sole risk on an as-is, where-is, and as-available basis. Cryptographic tokens are emergent technologies and carry with them high levels of technical risk and uncertainty. The assessment reports could include false positives, false negatives, and other unpredictable results. The services may access, and depend upon, multiple layers of third-parties.
