

CFG NINJA AUDITS

Security Assessment

Wiki Cat 2.0 Token

July 31, 2023

Audit Status: Pass

Audit Edition: Pinksale

3LADE POOL

Risk Analysis

Classifications of Manual Risk Results

| Classification | Description |
|-------------------|----------------------------------|
| ○ Critical | Danger or Potential Problems. |
| High | Be Careful or Fail test. |
| Low | Pass, Not-Detected or Safe Item. |
| ■ Informational | Function Detected |

Manual Code Review Risk Results

| Contract Priviledge | Description |
|---------------------|---------------|
| Buy Tax | 5% |
| Sale Tax | 5% |
| Cannot Sale | Pass |
| Cannot Sale | Pass |
| ■ Max Tax | 25 |
| ■ Modify Tax | Yes |
| Fee Check | Pass |
| ☐ Is Honeypot? | Not Detected. |
| Trading Cooldown | Not Detected |
| Can Pause Trade? | Pass |

| Contract Priviledge | Description |
|---------------------|--|
| Pause Transfer? | Not Detected |
| Max Tx? | Pass |
| ls Anti Whale? | Not Detected |
| ■ Is Anti Bot? | Not Detected |
| ■ Is Blacklist? | Not Detected |
| Blacklist Check | Pass |
| is Whitelist? | Not Detected |
| Can Mint? | Pass |
| ■ Is Proxy? | Not Detected |
| Can Take Ownership? | Not Detected |
| Hidden Owner? | Not Detected |
| Owner | 0xb3fd95a534acf97562205b1f78835ad3bd12deaf |
| Self Destruct? | Not Detected |
| External Call? | Not Detected |
| Other? | Not Detected |
| Holders | 1 |
| Auditor Confidence | low |

The following quick summary it's added to the project overview; however, there are more details about the audit and its results. Please read every detail.

Project Overview

Token Summary

| Parameter | Result |
|---------------|---|
| Address | 0x5537b2ca6d5D2172428C7868Ba027D3f58E24279 |
| Name | Wiki Cat 2.0 |
| Token Tracker | Wiki Cat 2.0 (WKC2) |
| Decimals | 9 |
| Supply | 1,000,000,000 |
| Platform | Binance Smart Chain |
| compiler | v0.8.4+commit.c7e474f2 |
| Contract Name | LiquidityGeneratorToken |
| Optimization | Yes with 200 runs |
| LicenseType | MIT |
| Language | Solidity |
| Codebase | https://bscscan.com/token/0x5537b2ca6d5d2172428c7868ba 027d3f58e24279#code |
| Payment Tx | Corporate |

Main Contract Assessed Contract Name

Call Graph

The contract for Wiki Cat 2.0 has the following call graph structure.

Smart Contract Vulnerability Checks

The Smart Contract Weakness Classification Registry (SWC Registry) is an implementation of the weakness classification scheme proposed in EIP-1470. It is loosely aligned to the terminologies and structure used in the Common Weakness Enumeration (CWE) while overlaying a wide range of weakness variants that are specific to smart contracts.

| weakness variants that are specific to smart contracts. | | | | |
|---|----------|---|----------------------------|----------------|
| ID | Severity | Name | File | location |
| SWC-100 | Pass | Function Default Visibility | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-101 | Pass | Integer Overflow and Underflow. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-102 | Pass | Outdated Compiler Version file. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-103 | Pass | A floating pragma is set. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-104 | Pass | Unchecked Call Return Value. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-105 | Pass | Unprotected Ether Withdrawal. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-106 | Pass | Unprotected SELFDESTRUCT Instruction | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-107 | Pass | Read of persistent state following external call. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-108 | Low | State variable visibility is not set | LiquidityGenerator.s ol | L: 959 C: 9 |
| SWC-109 | Pass | Uninitialized Storage Pointer. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-110 | Pass | Assert Violation. | LiquidityGenerator.s ol | L: 0 C: 0 |

| ID | Severity | Name | File | location |
|---------|----------|--|----------------------------|-----------|
| SWC-111 | Pass | Use of Deprecated Solidity Functions. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-112 | Pass | Delegate Call to Untrusted Callee. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-113 | Pass | Multiple calls are executed in the same transaction. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-114 | Pass | Transaction Order Dependence. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-115 | Pass | Authorization through tx.origin. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-116 | Pass | A control flow decision is made based on The block.timestamp environment variable. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-117 | Pass | Signature Malleability. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-118 | Pass | Incorrect Constructor Name. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-119 | Pass | Shadowing State Variables. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-120 | Pass | Potential use of block.number as source of randonmness. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-121 | Pass | Missing Protection against Signature Replay Attacks. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-122 | Pass | Lack of Proper Signature Verification. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-123 | Pass | Requirement Violation. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-124 | Pass | Write to Arbitrary Storage Location. | LiquidityGenerator.s | L: 0 C: 0 |

| ID | Severity | Name | File | location |
|---------|----------|--|----------------------------|-----------|
| SWC-125 | Pass | Incorrect Inheritance Order. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-126 | Pass | Insufficient Gas Griefing. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-127 | Pass | Arbitrary Jump with Function Type Variable. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-128 | Pass | DoS With Block Gas Limit. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-129 | Pass | Typographical Error. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-130 | Pass | Right-To-Left-Override control character (U +202E). | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-131 | Pass | Presence of unused variables. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-132 | Pass | Unexpected Ether balance. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-133 | Pass | Hash Collisions with Multiple Variable Length Arguments. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-134 | Pass | Message call with hardcoded gas amount. | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-135 | Pass | Code With No Effects (Irrelevant/Dead Code). | LiquidityGenerator.s ol | L: 0 C: 0 |
| SWC-136 | Pass | Unencrypted Private Data On-Chain. | LiquidityGenerator.s ol | L: 0 C: 0 |

We scan the contract for additional security issues using MYTHX and industry-standard security scanning tools.

Smart Contract Vulnerability Details

SWC-108 - State Variable Default Visibility

CWE-710: Improper Adherence to Coding Standards

Description:

Labeling the visibility explicitly makes it easier to catch incorrect assumptions about who can access the variable.

Remediation:

Variables can be specified as being public, internal or private. Explicitly define visibility for all state variables.

References:

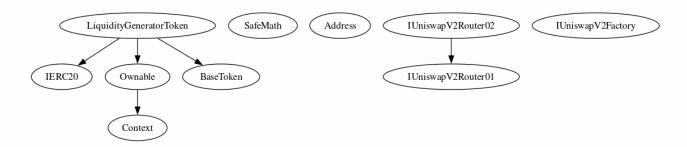

Ethereum Smart Contract Best Practices - Explicitly mark visibility in functions and state variables

Inheritance

The contract for Wiki Cat 2.0 has the following inheritance structure.

Smart Contract Advance Checks

| ID | Severity | Name | Result | Status |
|---------|---------------|--|--------|-----------|
| WKC2-01 | Low | Potential Sandwich Attacks. | Pass | Not-Found |
| WKC2-02 | Informational | Function Visibility Optimization | Pass | Detected |
| WKC2-03 | Low | Lack of Input Validation. | Pass | Detected |
| WKC2-04 | High | Centralized Risk In addLiquidity. | Pass | Not-Found |
| WKC2-05 | Low | Missing Event Emission. | Pass | Detected |
| WKC2-06 | Low | Conformance with Solidity Naming Conventions. | Pass | Not-Found |
| WKC2-07 | Low | State Variables could be Declared Constant. | Pass | Not-Found |
| WKC2-08 | Low | Dead Code Elimination. | Pass | Not-Found |
| WKC2-09 | High | Third Party Dependencies. | Pass | Detected |
| WKC2-10 | High | Initial Token Distribution. | Pass | Not-Found |
| WKC2-11 | High | claimStuckTokens can claim own tokens. | Pass | Detected |
| WKC2-12 | High | Centralization Risks In The X Role | Pass | Not-Found |
| WKC2-13 | Informational | Extra Gas Cost For User | Pass | Detected |
| WKC2-14 | Informational | Unnecessary Use Of SafeMath | Fail | Pending |
| WKC2-15 | Medium | Symbol Length Limitation due to Solidity Naming Standards. | Pass | Detected |

| ID | Severity | Name | Result | Status |
|---------|---------------|--|--------|--------------|
| WKC2-16 | Medium | Taxes can be up to 100% | Pass | Not Detected |
| WKC2-17 | Logical Issue | Highly Permissive Role Access.,` | Pass | Detected |
| WKC2-18 | Critical | Stop Transactions by using Enable Trade. | Pass | Not Detected |

WKC2-14 | Unnecessary Use Of SafeMath

| Category | Severity | Location | Status |
|------------------|---------------|---------------------------------|---------|
| Logical Issue | Informational | LiquidityGenerator.sol: 205, 10 | Pending |

Description

The SafeMath library is used unnecessarily. With Solidity compiler versions 0.8.0 or newer, arithmetic operations

will automatically revert in case of integer overflow or underflow.

library SafeMath {

An implementation of SafeMath library is found.

using SafeMath for uint256;

SafeMath library is used for uint256 type in contract.

Remediation

We advise removing the usage of SafeMath library and using the built-in arithmetic operations provided by the Solidity programming language

Project Action

Technical Findings Summary

Classification of Risk

| Severity | Description |
|-----------------|--|
| Critical | Risks are those that impact the safe functioning of a platform and must be addressed before launch. Users should not invest in any project with outstanding critical risks. |
| High | Risks can include centralization issues and logical errors. Under specific circumstances, these major risks can lead to loss of funds and/or control of the project. |
| ○ Medium | Risks may not pose a direct risk to users' funds, but they can affect the overall functioning of a platform |
| Low | Risks can be any of the above but on a smaller scale. They generally do not compromise the overall integrity of the Project, but they may be less efficient than other solutions. |
| 1 Informational | Errors are often recommended to improve the code's style or certain operations to fall within industry best practices. They usually do not affect the overall functioning of the code. |

Findings

| Severity | Found | Pending | Resolved |
|-----------------|-------|---------|----------|
| Critical | 0 | 0 | 0 |
| High | 0 | 0 | 0 |
| ○ Medium | 1 | 0 | 0 |
| Low | 0 | 0 | 0 |
| 1 Informational | 0 | 0 | 0 |
| Total | 1 | 0 | 0 |

Audit Result

Final Audit Score

| Review | Score |
|----------------|-------|
| Security Score | 85 |
| Auditor Score | 80 |

The Following Score System Has been Added to this page to help understand the value of the audit, the maximun score is 100, however to attain that value the project most pass and provide all the data needed for the assessment. Our Passing Score has been changed to 80 Points, if a project does not attain 80% is an automatic failure. Read our notes and final assessment below.

Audit Passed

Assessment Results

Important Notes:

- No issues or vulnerabilities were found.
- This is a Pinksale Liquidity Generator token, please review the tax structure.
- Website seems to be operational.
- Please DYOR on the project.

Auditor Score =80 Audit Passed

Appendix

Finding Categories

Centralization / Privilege

Centralization / Privilege findings refer to either feature logic or implementation of components that actagainst the nature of decentralization, such as explicit ownership or specialized access roles incombination with a mechanism to relocate funds.

Gas Optimization

Gas Optimization findings do not affect the functionality of the code but generate different, more optimalEVM opcodes resulting in a reduction on the total gas cost of a transaction.

Logical Issue

Logical Issue findings detail a fault in the logic of the linked code, such as an incorrect notion on howblock.timestamp works.

Control Flow

Control Flow findings concern the access control imposed on functions, such as owneronly functionsbeing invoke-able by anyone under certain circumstances.

Volatile Code

Volatile Code findings refer to segments of code that behave unexpectedly on certain edge cases that mayresult in a vulnerability.

Coding Style

Coding Style findings usually do not affect the generated byte-code but rather comment on how to makethe codebase more legible and, as a result, easily maintainable.

Inconsistency

Inconsistency findings refer to functions that should seemingly behave similarly yet contain different code, such as a constructor assignment imposing different require statements on the input variables than a setterfunction.

Coding Best Practices

ERC 20 Conding Standards are a set of rules that each developer should follow to ensure the code meet a set of creterias and is readable by all the developers.

Disclaimer

CFGNINJA has conducted an independent security assessment to verify the integrity of and highlight any vulnerabilities or errors, intentional or unintentional, that may be present in the reviewed code for the scope of this assessment. This report does not constitute agreement, acceptance, or advocation for the Project, and users relying on this report should not consider this as having any merit for financial advice in any shape, form, or nature. The contracts audited do not account for any economic developments that the Project in question may pursue, and the veracity of the findings thus presented in this report relate solely to the proficiency, competence, aptitude, and discretion of our independent auditors, who make no guarantees nor assurance that the contracts are entirely free of exploits, bugs, vulnerabilities or deprecation of technologies.

All information provided in this report does not constitute financial or investment advice, nor should it be used to signal that any persons reading this report should invest their funds without sufficient individual due diligence, regardless of the findings presented. Information is provided 'as is, and CFGNINJA is under no covenant to audited completeness, accuracy, or solidity of the contracts. In no event will CFGNINJA or its partners, employees, agents, or parties related to the provision of this audit report be liable to any parties for, or lack thereof, decisions or actions with regards to the information provided in this audit report.

The assessment services provided by CFGNINJA are subject to dependencies and are under continuing development. You agree that your access or use, including but not limited to any services, reports, and materials, will be at your sole risk on an as-is, where-is, and as-available basis. Cryptographic tokens are emergent technologies with high levels of technical risk and uncertainty. The assessment reports could include false positives, negatives, and unpredictable results. The services may access, and depend upon, multiple layers of third parties.
