

PRELIMINARY · FOR CLIENT REVIEW

SMART-CONTRACT SECURITY ASSESSMENT · PRELIMINARY

PresaleFactory

HOODPAD Launchpad

Contract: PresaleFactory

Address: 0x2ce5caa8...7b85a2

Chain: Robinhood Chain (4663)

Client: HOODPAD · voltipad.com

Prepared by: CFG Ninja

Date: September 6, 2026

Status: Preliminary (pending client response)

This is a **PRELIMINARY** report issued for client review. Findings and scores are subject to change after client response and a verification (re-audit) pass. Not for public distribution.

Overview

CONTRACT	PresaleFactory – Launchpad factory – deploys a fresh Token + Presale per sale
ADDRESS	0x2ce5caa81abe7af049a079dd2bcefd42ea7b85a2
CHAIN / COMPILER	Robinhood Chain (4663) · Solidity 0.8.34
CODEBASE	Flattened HOODPAD.sol (Factory + Presale + TaxToken). Every sale deploys fresh copies of the same code.

The factory deploys a fresh TaxToken and Presale for each sale (full CREATE deployments, not EIP-1167 proxies), seeds the sale with the full supply, wires tax exclusions, and renounces token ownership. It enforces that the token supply is sufficient for max claims plus listing liquidity. Only one low-severity item was found.

Result

99
/ 100

AUDIT PASSED

PASS

Score = 100 – (Critical×10 + High×5 + Medium×3 + Low×1). Pass threshold 80. Preliminary.

Vulnerability summary

SEVERITY	FOUND	PENDING	RESOLVED
Critical	0	0	0
High	0	0	0
Medium	0	0	0
Low	1	1	0
Total	1	1	0

All findings are Detected/Pending in this preliminary issuance; the Resolved column is populated in the final report after client remediation and re-audit.

Detailed findings

HOOD-01 | Overpaid creation fee is not refunded.

CATEGORY	SEVERITY	CVSS	LOCATION	STATUS
Best Practices	Low	2.5	PresaleFactory._takeFee	Detected

Description. _takeFee() requires msg.value >= createFee but then forwards the ENTIRE msg.value to feeTo. A caller who overpays does not get the excess back.

Recommendation. Refund (msg.value - createFee) to the caller, or forward only createFee and return the remainder.

Positive observations

- Renounces token ownership after setup – deployed tokens are ownerless.
- Supply-sufficiency check ensures max claims + listing liquidity fit within total supply.
- feeTo is immutable; only feeTo can change the creation fee.
- Excludes sale/creator/feeTo from tax before seeding liquidity.
- Permissionless, deterministic deployment flow – every sale uses identical audited code.

Scope & methodology

Manual line-by-line review of the flattened `HOODPAD.sol` as verified on Robinhood Chain, focused on access control, fund flows, reentrancy, tokenomics/tax logic, presale accounting, liquidity provisioning and centralization. On-chain bytecode presence and verification were confirmed via RPC and the block explorer. This preliminary assessment reviews the PresaleFactory logic; the launchpad deploys fresh copies of this exact code for every sale.

Disclaimer. This PRELIMINARY report is an engineering work product prepared by CFG Ninja for the client’s review. It reflects the code as reviewed on the date shown and is not final, not legal or financial advice, and not an endorsement or guarantee against loss. Severities and scores may change after client response and verification. Smart contracts carry inherent risk; deploy and invest at your own discretion.
