

PRELIMINARY · FOR CLIENT REVIEW

SMART-CONTRACT SECURITY ASSESSMENT · PRELIMINARY

TaxToken

HOODPAD Launchpad

Contract: TaxToken

Address: 0xBC43946C...BcC592

Chain: Robinhood Chain (4663)

Client: HOODPAD · voltipad.com

Prepared by: CFG Ninja

Date: September 6, 2026

Status: Preliminary (pending client response)

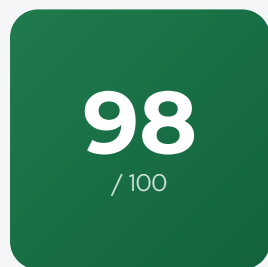

This is a **PRELIMINARY** report issued for client review. Findings and scores are subject to change after client response and a verification (re-audit) pass. Not for public distribution.

Overview

CONTRACT	TaxToken – ERC-20 token (2% DEX tax) – clone template deployed per sale
ADDRESS	0xBC43946C88e44c4f0F84d26FDfB1a9aa76BcC592
CHAIN / COMPILER	Robinhood Chain (4663) · Solidity 0.8.34
CODEBASE	Flattened HOODPAD.sol (Factory + Presale + TaxToken). Every sale deploys fresh copies of the same code.

A compact custom ERC-20 with a fixed 2% tax applied only to DEX trades. Supply is fixed at launch, there is no post-deploy mint, the tax rate has no setter, and the factory renounces ownership immediately after setup – leaving a trust-minimized token. Only minor, low-impact items were found.

Result

AUDIT PASSED

PASS

Score = 100 – (Critical×10 + High×5 + Medium×3 + Low×1). Pass threshold 80. Preliminary.

Vulnerability summary

SEVERITY	FOUND	PENDING	RESOLVED
Critical	0	0	0
High	0	0	0
Medium	0	0	0
Low	2	2	0
Total	2	2	0

All findings are Detected/Pending in this preliminary issuance; the Resolved column is populated in the final report after client remediation and re-audit.

Detailed findings

HOOD-01 | No recovery path for stranded assets.

CATEGORY	SEVERITY	CVSS	LOCATION	STATUS
Best Practices	Low	2.0	TaxToken	Detected

Description. The token has no function to recover ETH or unrelated ERC-20 tokens accidentally sent to the contract address; such funds are permanently locked.

Recommendation. Optionally add an owner-gated sweep for non-native stuck tokens. Note this is moot once ownership is renounced by the factory – accept as a known limitation.

HOOD-02 | Tax configuration frozen after ownership renounce.

CATEGORY	SEVERITY	CVSS	LOCATION	STATUS
Transparency	Low	2.0	TaxToken.setExcluded / setMarketPair	Detected

Description. The factory calls renounceOwnership() right after deployment, so setExcluded() and setMarketPair() become permanently unusable. Tax then applies only to the canonical WETH v2 pair resolved dynamically in _isDex(). New pairs/exclusions can never be added.

Recommendation. This is intentional and REDUCES owner power (a positive for trustlessness). Documented here for transparency; no change required if the frozen behaviour is intended.

Positive observations

- Fixed 2% tax with no setter – the rate can never be raised (no honeypot lever).
- No mint function after deployment; total supply fixed at 1,000,000,000.
- Ownership renounced by the factory immediately after setup.
- Checks-Effects-Interactions followed; transferFrom handles infinite allowance correctly.
- Correct tax exclusions for sale, creator, factory and the token itself.

Scope & methodology

Manual line-by-line review of the flattened `HOODPAD.sol` as verified on Robinhood Chain, focused on access control, fund flows, reentrancy, tokenomics/tax logic, presale accounting, liquidity provisioning and centralization. On-chain bytecode presence and verification were confirmed via RPC and the block explorer. This preliminary assessment reviews the TaxToken logic; the launchpad deploys fresh copies of this exact code for every sale.

Disclaimer. This PRELIMINARY report is an engineering work product prepared by CFG Ninja for the client's review. It reflects the code as reviewed on the date shown and is not final, not legal or financial advice, and not an endorsement or guarantee against loss. Severities and scores may change after client response and verification. Smart contracts carry inherent risk; deploy and invest at your own discretion.
