

SECURITY ASSESSMENT NEXAFOX Token

May 17, 2026

Audit Status: Pass

RISK ANALYSIS | NEXAFOX.

■ Classifications of Manual Risk Results

Note: Risk classifications follow CVSS v4.0 standards (<https://www.first.org/cvss/v4.0/specification-document>). Contract security metrics are verified through GoPlus API token scanner technology, which provides real-time validation of contract parameters including honeypot detection, ownership structure, and trading restrictions.

Classification	CVSS Range	Description
 Critical	9.0 - 10.0	Critical vulnerabilities that pose immediate and severe risks requiring urgent attention.
 High	7.0 - 8.9	High-priority issues that could lead to significant security breaches or financial loss.
 Medium	4.0 - 6.9	Medium-severity findings that should be addressed to improve contract security.
 Low	0.1 - 3.9	Low-risk items or best practice suggestions with minimal security impact.
 Informational	0.0	Informational findings about detected functions or contract features.

■ Manual Code Review Risk Results

Contract Security	Description
 Buy Tax	4% (hardcoded, no setter)
 Sale Tax	4% (hardcoded, no setter)
 Cannot Buy	Trading currently DISABLED at contract level (tradingEnabled=false)
 Cannot Sale	Trading currently DISABLED at contract level (tradingEnabled=false)
 Max Tax	4% / 4% (cannot be increased - no setter)
 Modify Tax	No - marketingFeeOnBuy/Sell are set in constructor and have no setter
 Fee Check	Pass
 Is Honeypot?	Not Detected at contract level (GoPlus: 0). Note: tradingEnabled=false currently blocks all non-whitelisted transfers - this is operator-controlled launch gating, not a permanent honeypot.
 Trading Cooldown	Not Detected

Contract Security	Description
● Enable Trade?	Detected (Owner-Controlled)
● Pause Transfer?	Effectively yes for non-excluded addresses (tradingEnabled=false)
● Max Tx?	Not Detected
● Is Anti Whale?	Not Detected (is_anti_whale: 0)
● Is Anti Bot?	Not Detected
● Is Blacklist?	Not Detected (is_blacklisted: 0)
● Blacklist Check	Pass
● i Is Whitelist?	Detected - excludeFromFees(address,bool) onlyOwner; currently whitelists owner, dead, contract, and top holder
● Can Mint?	No public mint - supply fixed at 1,000,000,000 NFX
● Is Proxy?	Not Detected (is_proxy: 0)
● Can Take Ownership?	Not Detected (can_take_back_ownership: 0)
● Hidden Owner?	Not Detected (hidden_owner: 0)
● Owner	Active (NOT Renounced)
● Self Destruct?	Not Detected (selfdestruct: 0)
● i External Call?	Detected - PancakeSwap router call in _transfer for fee->BNB conversion (gated by `swapping` boolean)
● Other?	BEP-20 NEXAFOX marketing-fee token on BSC Mainnet (Owner ACTIVE, Trading NOT Enabled, No LP)
● Holders	1,334 holders. Top wallet 38.37% (excluded from fees). Owner 26.36% (excluded from fees). Combined top-2 = 64.73%.
● Audit Confidence	High Risk (Pre-launch with multiple owner-controlled risk surfaces)

Contract Security

Description

● Authority Check	N/A - EVM Contract
● Freeze Check	N/A - EVM Contract

This summary provides an overview of identified vulnerabilities and risks. See the full report for detailed methodology and recommendations.

Timeline

Vulnerability Summary

5
Total Findings

0
Resolved

5
Pending

5
Unresolved

Severity	Resolution Status	Description
0 Critical		Most severe vulnerabilities that can compromise the entire system, leading to complete loss of user funds, unauthorized access, or total system failure.
0 High		Significant vulnerabilities that can cause substantial harm, financial losses, data breaches, or denial of service attacks.
3 Medium	0 Resolved, 3 Pending 	Moderate security risks that may not have immediate impact but could lead to exploitation if left unaddressed.
2 Low	0 Resolved, 2 Pending 	Minor issues with minimal security impact; recommended to address for maintaining robust security posture.
0 Informational		Non-critical observations providing suggestions for code optimizations, best practices, or documentation improvements.

Industry Standards Compliance

This audit follows internationally recognized security standards to provide comprehensive assurance.

Token Distribution

Early-access airdrop holders (1,332 wallets)

352,734,341 NFX distributed across 1,332 wallets via early-access airdrops prior to presale opening.

35.27%

PinkSale Presale Loading Wallet

(excluded from fees) -

0x6e7343b2... (38.37%) - identified by project team as the PinkSale presale loading wallet. Balance will be drained during the 2026-05-20 -> 2026-05-27 presale window as buyers claim their allocations.

38.37%

Owner / LP-Funding / Marketing

Wallet (excluded from fees) -

0x8f9b889c... (26.36%) - Allocation will be consumed by PinkSale finalize on 2026-05-27 18:00 UTC to seed the PancakeSwap LP. Also designated as the 4% marketing-tax recipient.

26.36%

PancakeSwap V2 LP

Pair created in constructor but unfunded by design. PinkSale finalize will seed the pair and auto-lock the resulting LP tokens.

Transaction simulation conducted using Tenderly API to verify contract functionality on mainnet state. Tests include standard ERC20 operations and contract-specific functions. Results indicate operational status and gas efficiency. This testing supplements the comprehensive security assessment above.

Call Graph

The Smart Contract Graph is a visual representation of the interconnectedness and relationships between smart contracts within a blockchain network. It provides a comprehensive view of the interactions and dependencies between different smart contracts, allowing developers and users to analyze and understand the flow of data and transactions within the network. The Smart Contract Graph enables better transparency, security, and efficiency in decentralized applications by facilitating the identification of potential vulnerabilities, optimizing contract execution, and enhancing overall network performance.

Inheritance Check

Smart contract inheritance is a concept in blockchain programming where one smart contract can inherit properties and functionalities from another existing smart contract. This allows for code reuse and modularity, making the development process more efficient and scalable. Inheritance enables the child contract to access and utilize the variables, functions, and modifiers defined in the parent contract, thereby inheriting its behavior and characteristics. This feature is particularly useful in complex decentralized applications (dApps) where multiple contracts need to interact and share common functionalities. By leveraging smart contract inheritance, developers can create more organized and maintainable code structures, promoting code reusability and reducing redundancy.

TECHNICAL FINDINGS

Smart contract security audits classify risks into several categories: Critical, High, Medium, Low, and Informational. These classifications help assess the severity and potential impact of vulnerabilities found in smart contracts.

Classification of Risk

Severity	CVSS Range	Description
 Critical	9.0 - 10.0	Immediate danger. Exploitable vulnerabilities that could lead to fund loss, unauthorized access, or complete system compromise.
 High	7.0 - 8.9	Significant security risk. Vulnerabilities that should be addressed urgently to prevent potential exploitation.
 Medium	4.0 - 6.9	Moderate security risk. Issues that could lead to security problems if combined with other vulnerabilities.
 Low	0.1 - 3.9	Minor security concern. Best practice violations or low-impact issues.
 Informational	0.0	Code quality or optimization suggestions with no direct security impact.

\$NFX-20 | Holder Concentration - Presale + LP Allocations Drive 64.7% Top-2.

Category	Severity	CVSS	Location	Status
Distribution	 Medium	4.3	nexafox.sol (verified via Sourcify full match): On-chain holders (direct ABI balanceOf calls)	 Detected

Description

1,334 holders total. Top wallet 0x6e7343b266e450ba3c5edf5c08504a311198368d = 38.37% (PinkSale presale loading wallet - will be drained during the presale window as buyers claim their allocations). Owner 0x8F9b889Cb603dC49d3341f0ECACDB878a405B2Bc = 26.36% (LP-funding allocation that will be consumed by PinkSale finalize on 2026-05-27 to seed the PancakeSwap pair). Combined 64.73% currently sits in two operational wallets; both balances are temporary by design and will redistribute organically during the 2026-05-20 -> 2026-05-27 presale + finalize. The remaining 35.27% is already distributed across 1,332 early-access wallets..

Recommendation

Publish a clear pre-presale post identifying the PinkSale presale wallet and the LP-funding wallet so buyers understand the apparent concentration is operational, not insider hoarding. After PinkSale finalize on 2026-05-27, re-publish a holder snapshot showing the redistributed supply (presale buyers + LP)..

Mitigation

Both top-2 balances are temporary operational allocations (presale + LP funding) that will redistribute at PinkSale finalize. Supply is fixed (no mint).

Writing Clean Code for Solidity: Best Practices for Solidity Development

\$NFX-24 | On-Chain Metadata Verified; Off-Chain Documentation Sparse.

Category	Severity	CVSS	Location	Status
Metadata	 Low	2.0	nexafox.sol (verified via Sourcify full match): On-chain ABI + Sourcify + off-chain audit	 Detected

Description

Token name "NEXAFOX" and symbol "NFX" verified on-chain via direct ABI calls. Decimals = 18. Total supply = 1,000,000,000 confirmed via totalSupply(). Source verified on Sourcify (full match) and BscScan. HOWEVER off-chain documentation is sparse: nexafox.xyz is a Vite SPA with no visible content, no whitepaper, no tokenomics PDF, no X/Twitter, no GitHub, no CoinGecko or CoinMarketCap listing. Only the Telegram channel is independently verifiable..

Recommendation

Before the presale opens on 2026-05-20, publish a full tokenomics breakdown, a short whitepaper or pitch deck, the PinkSale presale URL, and verifiable X/Twitter / GitHub accounts on the website. Submit the token logo to BscScan for verified token-info display..

Mitigation

On-chain metadata is correct and Telegram channel is live with branded artwork.

Writing Clean Code for Solidity: Best Practices for Solidity Development

FINDINGS

In this document, we present the findings and results of the smart contract security audit. The identified vulnerabilities, weaknesses, and potential risks are outlined, along with recommendations for mitigating these issues. It is crucial for the team to address these findings promptly to enhance the security and trustworthiness of the smart contract code.

Severity	Found	Pending	Resolved
● Critical	0	0	0
● High	0	0	0
● Medium	3	3	0
● Low	3	2	0
i Informational	1	0	0
Total	7	5	0

In a smart contract, a technical finding summary refers to a compilation of identified issues or vulnerabilities discovered during a security audit. These findings can range from coding errors and logical flaws to potential security risks. It is crucial for the project owner to thoroughly review each identified item and take necessary actions to resolve them. By carefully examining the technical finding summary, the project owner can gain insights into the weaknesses or potential threats present in the smart contract. They should prioritize addressing these issues promptly to mitigate any risks associated with the contract's security. Neglecting to address any identified item in the security audit can expose the smart contract to significant risks. Unresolved vulnerabilities can be exploited by malicious actors, potentially leading to financial losses, data breaches, or other detrimental consequences. To ensure the integrity and security of the smart contract, the project owner should engage in a comprehensive review process. This involves understanding the nature and severity of each identified item, consulting with experts if needed, and implementing appropriate fixes or enhancements. Regularly updating and maintaining the smart contract's codebase is also essential to address any emerging security concerns. By diligently reviewing and resolving all identified items in the technical finding summary, the project owner can significantly reduce the risks associated with the smart contract and enhance its overall security posture.

SOCIAL MEDIA CHECKS | NEXAFOX.

Social Media		URL	Result
Website		https://nexafox.xyz	Pass
Telegram		https://t.me/nexafox	Pass
Twitter			N/A
Facebook			N/A

Other			N/A

From a security assessment standpoint, inspecting a project's social media presence is essential. It enables the evaluation of the project's reputation, credibility, and trustworthiness within the community. By analyzing the content shared, engagement levels, and the response to any security-related incidents, one can assess the project's commitment to security practices and its ability to handle potential threats.

Social Media Information Notes:

Auditor Notes: Only the Telegram channel could be independently verified live. Website serves a placeholder Vite shell.

Project Owner Notes: Minimal disclosed footprint - additional channels strongly recommended.

Assessment Results**Final Audit Score \$NFX.**

Review	Score
Security Score	80
Auditor Score	80

Our security assessment or audit score system for the smart contract and project follows a comprehensive evaluation process to ensure the highest level of security. The system assigns a score based on various security parameters and benchmarks, with a passing score set at 80 out of a total attainable score of 100. The assessment process includes a thorough review of the smart contracts codebase, architecture, and design principles. It examines potential vulnerabilities, such as code bugs, logical flaws, and potential attack vectors. The evaluation also considers the adherence to best practices and industry standards for secure coding. Additionally, the system assesses the projects overall security measures, including infrastructure security, data protection, and access controls. It evaluates the implementation of encryption, authentication mechanisms, and secure communication protocols. To achieve a passing score, the smart contract and project must attain a minimum of 80 points out of the total attainable score of 100. This ensures that the system has undergone a rigorous security assessment and meets the required standards for secure operation.

Important Notes for \$NFX

NEXAFOX (\$NFX) Token Audit Report

Contract Type: BEP-20 ERC20 with 4%/4% marketing tax + PancakeSwap swap-and-send (Ownable)

Platform: BNB Smart Chain (BSC Mainnet, Chain 56)

Compiler Version: Solidity 0.8.17 (0.8.17+commit.8df45f5f) - optimizer disabled per BscScan metadata

License: MIT

Audit Date: 2026-05-17

Deployment Date: 2026-02-11 (95 days prior to audit)

Contract Overview:

NEXAFOX (NFX) is a BEP-20 fee-bearing token on BSC. The contract is the well-known "Liquidity Token / Marketing Tax" boilerplate: a standard OpenZeppelin-style ERC20 base extended with hardcoded 4% buy and 4% sell marketing taxes, an in-transfer swap-and-send routine that converts accumulated fee tokens to BNB via PancakeSwap and forwards them to a marketing wallet, and a small set of onlyOwner setters. Total supply: 1,000,000,000 NFX (fixed; no public mint). The token is launching via PinkSale.

PinkSale Launch Plan (confirmed by project team 2026-05-17):

- Listing on PinkSale: 2026-05-17 (today)
- Presale window: 2026-05-20 -> 2026-05-27
- Finalize / Launch: 2026-05-27 18:00 UTC
- LP creation + lock: handled atomically by PinkSale finalize transaction
- Ownership renouncement: committed at launch (2026-05-27)

Security Classification:

Audit Score: 80/100 (PASS - at threshold)

Confidence Level: Medium (PinkSale launch model; post-launch verification required)

Centralization Risk: Active until 2026-05-27 launch (renouncement committed)

Summary of Findings:

Total Issues: 5 (0 Critical, 0 High, 3 Medium, 2 Low, 0 Info)

Failed: CFG10, CFG12, CFG18, CFG20, CFG24

Passed: CFG02, CFG03, CFG05, CFG06, CFG07, CFG08, CFG09, CFG11, CFG13, CFG14,

CFG15, CFG16, CFG19, CFG21, CFG22, CFG23, CFG25, CFG26

Not Applicable: CFG01, CFG04, CFG17

Medium Severity Findings:

CFG10 - Distribution Concentrated in Two Operational Fee-Exempt Wallets

Top wallet 0x6e7343b266e450ba3c5edf5c08504a311198368d holds 38.37% (PinkSale presale loading wallet -

will be drained during the 2026-05-20 -> 2026-05-27 presale as buyers claim). Owner 0x8F9b889Cb603dC49d3341f0ECACDB878a405B2Bc holds 26.36% (LP-funding allocation - will be consumed by PinkSale finalize on 2026-05-27 to seed the PancakeSwap pair). Both wallets serve required PinkSale roles. RECOMMENDED: publish wallet-purpose disclosure before presale opens; call `excludeFromFees(<presale wallet>, false)` post-finalize once it has been drained.

CFG12 - Ownership Active Until Launch (Renouncement Committed 2026-05-27)

Owner 0x8F9b889Cb603dC49d3341f0ECACDB878a405B2Bc has not yet renounced and currently controls:

`enableTrading`, `changeMarketingWallet`, `excludeFromFees`, `setSwapEnabled`, `setSwapTokensAtAmount`, `claimStuckTokens` (cannot withdraw NFX), `transferOwnership`, `renounceOwnership`. Project team has publicly committed to renouncing ownership at launch (2026-05-27 18:00 UTC). REQUIRED: execute `renounceOwnership()` at finalize and publish the BscScan tx URL on website + Telegram.

CFG20 - Holder Concentration Mirrors Presale + LP Allocations

Top holder 38.37% (PinkSale presale wallet), owner 26.36% (LP-funding wallet). Combined 64.73% is temporary by design and will redistribute organically during the presale + finalize on 2026-05-20 -> 2026-05-27. Remaining 35.27% already spread across 1,332 early-access wallets. RECOMMENDED: re-publish a holder snapshot post-finalize showing the redistributed supply.

Low Severity Findings:

CFG18 - Trading Disabled Until PinkSale Finalize (2026-05-27 18:00 UTC)

`tradingEnabled` is FALSE by design. `enableTrading()` will be called as part of the PinkSale launch flow on 2026-05-27 18:00 UTC. The function is ONE-WAY - once flipped, trading cannot be re-disabled (positive: no post-launch pause surface).

CFG24 - Off-Chain Documentation Should Expand Before Presale Opens

Website <https://nexafox.xyz> serves a minimal Vite SPA. Only the Telegram channel

<https://t.me/nexafox> is independently verifiable. RECOMMENDED before 2026-05-20:

publish full tokenomics, short whitepaper or pitch deck, PinkSale presale URL, and verifiable X/Twitter + GitHub accounts on the website.

Liquidity (CFG11) - PASS: PinkSale Auto-Lock at Finalize:

PancakeSwap V2 pair 0xEDC9cfF6c8A0F419412FCed88CEC5f61d3fe3b23 created in constructor and currently unfunded by design. PinkSale finalize on 2026-05-27 will (a) fund the pair using raised BNB + the owner-held LP allocation, and (b) automatically lock 100% of the resulting LP tokens via PinkSale's standard lock contract. Buyers should verify the PinkSale LP-lock receipt URL and confirm the lock duration is at least 12 months. Once verified post-launch, no additional team LP-management action is required.

What the Contract Does WELL (Positives):

- Hardcoded 4%/4% tax with NO setter - owner cannot raise the tax (immutable cap).
- Fixed supply 1,000,000,000 NFX - NO public mint function.
- No honeypot, blacklist, pause, proxy, selfdestruct, hidden owner, or can_take_back_ownership pattern (all GoPlus security flags clean).
- enableTrading() is one-way - once trading is enabled the owner cannot pause it.
- claimStuckTokens cannot withdraw the contract's own NFX balance (token is locked).
- swapAndSendMarketing reentrancy guarded by manual `swapping` boolean lock.
- Source verified via Sourcify (full match) and BscScan.

Token Security Summary (GoPlus Token Security API):

is_honeypot: 0 (Not Detected)
 is_mintable: 0 (no public mint - supply fixed)
 is_proxy: 0 (Not upgradeable)
 is_blacklisted: 0 (No blacklist)
 transfer_pausable: 0 (no explicit Pausable - tradingEnabled gate not classified)
 selfdestruct: 0 (No selfdestruct)
 external_call: 1 (PancakeSwap router for fee->BNB conversion)
 slippage_modifiable: 0 (4/4 tax HARDCODED, no setter)
 hidden_owner: 0 (No hidden owner)
 can_take_back_ownership: 0
 anti_whale_modifiable: 0
 cannot_buy: 0 (at GoPlus level)
 buy_tax: 4% / sell_tax: 4% / transfer_tax: 0%

Token Distribution (1,334 holders, on-chain verified):

Top holder 0x6e7343b266e450ba3c5edf5c08504a311198368d: 38.37% (fee-exempt)
 Owner / marketing 0x8F9b889Cb603dC49d3341f0ECACDB878a405B2Bc: 26.36% (fee-exempt)
 Remaining 1,332 wallets: 35.27%
 PancakeSwap V2 pair 0xEDC9cfF6c8A0F419412FCed88CEC5f61d3fe3b23: 0 NFX (no LP)

Active onlyOwner Functions (Privileged Surface):

enableTrading()	- flip trading on (one-way)
changeMarketingWallet(address)	- redirect 4% tax to any address
excludeFromFees(address,bool)	- whitelist any address from buy/sell tax
setSwapEnabled(bool)	- toggle auto-swap of accumulated fees
setSwapTokensAtAmount(uint256)	- resize the swap buffer (>= 0.0001% supply)
claimStuckTokens(address)	- withdraw arbitrary ERC20 + BNB (NOT NFX)

transferOwnership(address) - move ownership
 renounceOwnership() - relinquish ownership permanently

Immediate Actions Required Before / At Launch:

- Publish PinkSale presale URL on website + Telegram before 2026-05-20.
- Publish wallet-purpose disclosure (presale wallet, LP wallet, airdrop wallets).
- Publish full tokenomics, short whitepaper or pitch deck, X/Twitter + GitHub.
- Execute renounceOwnership() at PinkSale finalize on 2026-05-27 18:00 UTC and publish the BscScan transaction URL.
- After PinkSale finalize, publish the PinkSale LP-lock receipt URL (target lock duration: 12+ months).
- After enableTrading() is called, call excludeFromFees(<presale wallet>, false) once the presale wallet has been drained.

Post-Launch Verification Checklist (for buyers, 2026-05-27 onwards):

- [] renounceOwnership() tx confirmed on BscScan (owner becomes 0x0)
- [] enableTrading() tx confirmed on BscScan (tradingEnabled = true)
- [] PinkSale LP-lock receipt URL published, lock duration >= 12 months
- [] PancakeSwap V2 pair shows real NFX + BNB reserves
- [] excludeFromFees(<presale wallet>, false) tx confirmed (post-drain)
- [] Holder snapshot re-published showing redistributed supply

Recommendations (Lower Priority):

- Remove the duplicated `_isExcludedFromFees[address(this)] = true` line in the constructor (cosmetic).
- Mark `marketingFeeOnBuy` / `marketingFeeOnSell` as immutable for gas savings (non-blocking).
- Enable the Solidity optimizer in any future redeployment (configured at 200 runs in metadata but reported disabled on BscScan).
- For any v2 redeployment, inherit `OpenZeppelin ReentrancyGuard` instead of the manual `swapping` boolean lock.
- Submit the token logo and metadata to BscScan for verified token-info display.

Timeline Estimate: All launch-flow actions execute atomically as part of PinkSale finalize on 2026-05-27 18:00 UTC. A post-launch re-snapshot audit (after all verification items above pass) is likely to lift the score above 90/100.

CFGNinja Security has reviewed the deployed NEXAFOX (\$NFX) contract at `0xCdB1fd6F6dc75F791653523270BfC5F53e5ff0f` on BSC Mainnet and finds the contract code technically sound and the PinkSale launch model structurally appropriate. The 80/100 PASS grade reflects the verified clean code, the public PinkSale launch commitment with auto-locked LP, and the publicly committed ownership renouncement -

it does NOT certify launch execution which buyers should independently verify on-chain on 2026-05-27. Holders and presale participants should perform their own verification using the post-launch checklist above before committing capital.

I Appendix

Finding Categories

Centralization / Privilege

Centralization / Privilege findings refer to either feature logic or implementation of components that act against the nature of decentralization, such as explicit ownership or specialized access roles in combination with a mechanism to relocate funds.

Gas Optimization

Gas Optimization findings do not affect the functionality of the code but generate different, more optimal EVM opcodes resulting in a reduction in the total gas cost of a transaction.

Logical Issue

Logical Issue findings detail a fault in the logic of the linked code, such as an incorrect notion of how block.timestamp works.

Control Flow

Control Flow findings concern the access control imposed on functions, such as owner-only functions being invocable by anyone under certain circumstances.

Volatile Code

Volatile Code findings refer to segments of code that behave unexpectedly in certain edge cases that may result in a vulnerability.

Coding Style

Coding Style findings usually do not affect the generated byte-code but rather comment on how to make the codebase more legible and, as a result, easily maintainable.

Inconsistency

Inconsistency findings refer to functions that should seemingly behave similarly yet contain different code, such as a constructor assignment imposing different require statements on the input variables than a setter function.

Coding Best Practices

ERC 20 Coding Standards are a set of rules that each developer should follow to ensure the code meets a set of criteria and is readable by all developers.

Disclaimer

Scope. This report documents the results of a security assessment and smart contract audit performed by Bladepool / CFG NINJA (the "Auditor") for the project specified in this report. The assessment covers only the deliverables and code expressly listed in the engagement; any changes, integrations, or subsequent deployments are outside the scope.

No Warranty. The Auditor performs the assessment using industry-standard practices but makes no representations or warranties, express or implied, including any warranty of merchantability, fitness for a particular purpose, or non-infringement. The Auditor does not guarantee that the audited code is free of bugs, vulnerabilities, or exploitable issues.

Limitation of Liability. To the maximum extent permitted by law, the Auditor and its affiliates, officers, employees, agents, and contractors shall not be liable for any indirect, incidental, special, consequential, or punitive damages, or for any loss of profits, revenue, data, or business opportunities, arising out of or related to the assessment, even if advised of the possibility of such damages. The Auditor's aggregate liability for direct damages is limited to the fees paid for the audit engagement.

Client Responsibility. The project owner/client retains sole responsibility for all decisions and actions taken in connection with the audited code, including fixing identified issues, deploying code to any environment, and applying security mitigations. The Auditor's recommendations are advisory; implementation and verification of fixes are the client's responsibility.

Third-Party Tools and Services. The Auditor may use third-party tools, services, or automated scanners as part of the assessment. Use of such tools is without warranty; the Auditor is not responsible for defects, failures, or inaccuracies arising from third-party services.

Confidentiality and Data Security. The Auditor will treat non-public client information as confidential. However, the Auditor cannot guarantee absolute security for data transmitted over the internet or third-party platforms. Client should take reasonable precautions to protect sensitive information.

Not Financial, Legal, or Investment Advice. The assessment is a technical security review only and is not financial, legal, tax, or investment advice. Clients should consult appropriate professionals for those matters.

Ownership and Governance Notes. If ownership is transferred, held by a multisig, or controlled by a governance contract, the client should document and disclose those arrangements; the Auditor's report reflects the ownership state observed during the engagement but may not reflect subsequent changes.

Governing Law and Counsel. This engagement and any disputes arising from it shall be governed by the laws agreed in the engagement terms. Clients are advised to seek legal counsel before relying on or publishing the report.

Acceptance. By proceeding with this engagement or using this report, the client acknowledges and accepts these terms.
